

JEEVESH SINGALE

AI Engineer · LLM / RAG Systems · Data Engineer

London, UK · +44 7436 357330 · jeevesh2515@gmail.com

[LinkedIn](#) · [GitHub](#) · [Portfolio](#)

1 Professional Summary

AI and Data Engineer with 3+ years shipping production ML pipelines, data platforms, and full-stack AI products. The past year has been focused specifically on LLM and RAG systems—including multi-agent orchestration, semantic vector search, and knowledge graph traversal through my flagship build, ExpertIQ Copilot. Earlier work centred on productionising ensemble ML models on 1M+ record datasets (96% accuracy, 12% above benchmark) and building cloud-native ETL workflows at scale. Databricks Generative AI certified. MSc Information Systems, University of Nottingham. Based in London and targeting AI Engineer, LLM Engineer, and Data Engineer roles across the UK.

2 Technical Skills

LLM & RAG: LangChain, LangGraph, Multi-Agent Orchestration, RAG Pipelines, Prompt Engineering, Semantic Search, Vector Embeddings, ChromaDB, Pinecone, OpenAI API, Groq (Llama 3.1 70B), Claude API, Ollama, MCP, Knowledge Graphs (NetworkX), HyDE Retrieval, Self-Querying Metadata Filters, LangSmith Observability

ML & Data Science: Python, scikit-learn, XGBoost, LSTM, TensorFlow, PyTorch, Sentence-Transformers, SHAP, LIME, A/B Testing

Data Engineering: SQL, PostgreSQL, MongoDB, Apache Spark, Databricks, ETL/ELT, Apache Airflow, dbt, Azure Data Factory

Cloud & DevOps: Azure, AWS, GCP, Docker, Kubernetes, GitHub Actions CI/CD, MLOps, Model Monitoring, FastAPI, REST API Design

Web & APIs: Next.js (React 19), TypeScript, JavaScript, JWT Authentication, bcrypt, Rate Limiting, Smart Contract Integration

Visualisation: D3.js, Power BI, Tableau, R

3 Professional Experience

AI-First Software Engineer & Data Analyst

Sep 2025 – Present

Risidio, London, UK

- Shipped a Web3 Creative Revenue & Rights Dashboard in Next.js with integrated smart contract logic for automated multi-party royalty distribution, enabling transparent on-chain revenue settlement for artists and rights holders.
- Built automated ETL pipelines aggregating multi-source royalty and financial data into a centralised reporting layer, significantly cutting manual finance reporting and improving stakeholder visibility.
- Developed the AI-First Academy, an internal upskilling platform delivering LLM and MLOps curriculum to cross-functional teams.
- Hardened application services with JWT authentication, bcrypt hashing, slowapi rate limiting, and Bandit static analysis; maintained GitHub Actions CI/CD pipelines.

Web Data Analyst & Web Developer

Apr 2025 – Sep 2025

Javish Jewellery, Mumbai, India

- Architected multi-source ETL/ELT pipelines using Databricks and Apache Spark, cutting manual reporting time by 50% and enabling real-time sales strategy optimisation.
- Productionised ML models for customer segmentation and demand forecasting, improving inventory efficiency by 25%; built a REST API integration layer for downstream BI tooling.
- Designed Power BI and Tableau dashboards around A/B-tested KPI frameworks, improving leadership decision-making speed by 20%.

Data Science Apprentice

Jun 2022 – Mar 2025

Global EduTech, Pune, India

- Built and productionised end-to-end ML pipelines on 1M+ educational records using XGBoost and LSTM ensemble models, achieving 96% prediction accuracy (12% above industry benchmark) and a 30% uplift in projected student engagement.
- Engineered ETL workflows across AWS and Azure with 99%+ uptime; implemented MLOps monitoring and SHAP/LIME explainability frameworks to support data governance.
- Deployed 5+ ML models with full observability stack, system design docs, and stakeholder reporting.

4 Projects

ExpertIQ Copilot — AI Expert Discovery & Retrieval Platform

Apr 2026 – Ongoing

Personal Project · github.com/jeevesh2515/expertiq-copilot

- Architected a production-grade retrieval system around a 6-node LangGraph agent workflow (Query Analyser → Vector Searcher → Graph Expander → Reranker → Summariser → Response Builder) orchestrated via Groq (Llama 3.1 70B).
- Implemented dual storage with PostgreSQL for relational queries and ChromaDB/Pinecone for vector retrieval;

designed a NetworkX knowledge graph with multi-hop BFS traversal to surface experts invisible to keyword or pure vector search.

- Built advanced retrieval features: Hypothetical Document Embeddings (HyDE) for intent alignment, parent-child semantic chunking for precise sentence-level matching, and self-querying metadata filtering that parses natural language constraints into SQLAlchemy operator trees.
- Developed a FastAPI backend with Pydantic v2, dynamic database auto-migrations, and JWT/bcrypt security; Next.js 14 frontend with D3.js force-directed knowledge graph visualisation.
- Added production observability via LangSmith tracing and three custom automated evaluators (expert fidelity, grounding precision, constraint precision); containerised with Docker and deployed via GitHub Actions to Railway (backend) and Vercel (frontend). Includes a 47-case Pytest suite.

Telecom Customer Churn Prediction Pipeline

Jun 2024 – Sep 2024

- End-to-end MLOps pipeline processing 1M+ rows; ensemble of Random Forest, XGBoost, and LSTM achieved 96% accuracy, projecting £2.3M in annual savings. Integrated SHAP/LIME explainability and data governance documentation.

AI Client Onboarding Automation

Aug 2025

- Cut client onboarding SLA by 60% through AI and RPA integration for real-time document processing, delivering 35% throughput improvement and 25% higher customer satisfaction.

5Education

MSc Information Systems & Operations Management — University of Nottingham, UK Sep 2023 – Sep 2024

Modules: Data Management, Business Intelligence & Analytics, Management Science, Information Systems Design

BEng Information Technology — Mumbai University, India

Aug 2019 – Jun 2023

GPA: 9.2/10 · Capstone: Share Market Prediction using Machine Learning

6Certifications

- RAG & Advanced Retrieval — DeepLearning.AI (2026)
- Databricks Generative AI Fundamentals (2025)
- Working with OpenAI API — DataCamp (2025)
- Microsoft Power BI — Copilot & Dashboarding (2025)
- Google Data Foundations (2024)
- Python Specialization — University of Michigan (2023)
- In Progress: Azure Fundamentals AZ-900, Anthropic MCP & Advanced Topics
